## VISI-DOWNLOAD - NEW FEATURES

### Multi Manufacturer, Multilingual Software for Oximeters & Capnometers

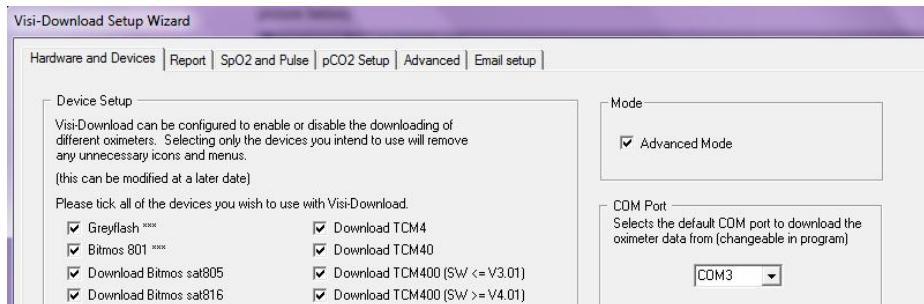

Visi-Download is possibly the most exciting new software around for oximetry and capnometry. If you are one of the very few who aren't already using **Download 2001\***, you probably know it by repute. Visi-Download isn't just a new version but a radical rebuild and whilst it's hard to believe, it is now even easier to use!

Visi-Download has been tried and tested before shipping with other devices, as we've been shipping it as Download-3 with our Grey Flash systems for over a year. It works!

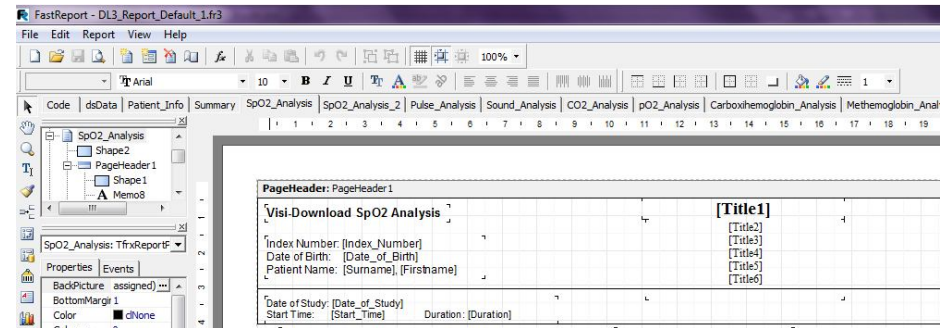

**Two software capability levels in one package: Basic and Advanced.** You can choose which level to operate at and move from level to level as you wish. For example, use the Basic level (first picture below) for those whose job is to acquire and send on data to hide the necessary but complex features of the Advanced level (second picture below).

**Setup Wizard:** Configure the software at any time. For example, to choose the appropriate devices for your lab and your data storage facilities.

**Customisable Report Generator:** We have added a report generator so we (or you) can customise the analysis reports to your own needs. The analysis and data reports are saveable, printable, exportable in Adobe format for efficient viewing and storage, or even to Microsoft Word format (rtf) for insertion into your record system. A range of default reports is included.

**Software licence key:** No hardware key to worry about losing. Transferrable between computers.

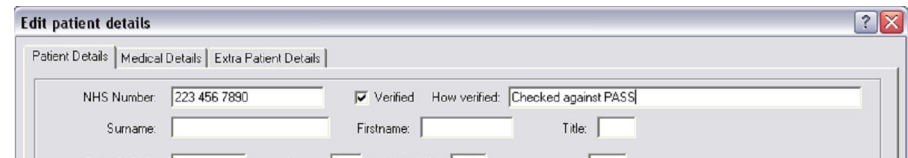

**Send:** Data/ reports to a central storage area/ report centre

**Archive feature:** Choose files - for example, to transfer to a server when you no longer need them locally available. Available from the Open box.

**Export to email/ ftp sites/ memory cards/ databases:** Includes a simple to use export system for the results you need to save, including to Microsoft Access databases and Hoxam.

**Audio playback:** For sound recordings!

**NHS Number Standard DSC Notice (UK):** Meets the new requirement to enter and validate NHS numbers for your patients

**Rental mode:** Rather than having to buy, licence the software for a specific period.

**Demo mode:** After installation, try the software for up to a month / 12 downloads before needing to get a full licence.
